## Product Notes & Specifications

### ElectraFlo II Flexible Heated Hose

#### Series FP Freeze Protection Hose

#### **Hose Description**

Electra-Flo II Series FP electrically heated hose is the easy and economical way to ensure your media will not freeze in harsh winter conditions. Hose cores can be made out of virtually any material, in IDs from 1/4" to over 6" to suit your application and environment. The Series FP electrically heated hose will be an easy upgrade to any current hose application as they do not require a controller or require any maintenance. Just plug the electrically heated hose into a standard socket or breaker and forget about it and experience real freeze protection.

Contact us to see how this may work for your application.

#### **Core Material**

Thermal Insulation

Waterproof and lightweight.

#### **External Jacket**

Abrasion-resistant braided sleeving, PVC jacket, or ductile cover.

#### **Electrical**

Standard wattage is ~6-10 watts per foot with a standard 120 volt or 240 volt power source. Heating element is completely waterproof for continuous outdoor usage. Supplied with grounded UL three prong plug complete and ready to use. Made in the U.S.A.

We guarantee the performance of Series FP Heated Hose to -50°F.

Please contact our customer service department for additional specifications or a quote.
